We are excited to announce that we have incorporated **Digital Retinal Photography** into our practice. This is a new, highly sophisticated, computerized instrument that helps with **early detection of and tracking of Retinal and Optic Nerve Diseases.**

Retinal and Optic Nerve Diseases are major eye health problems and are leading causes of blindness in the United States. To treat Retinal and Optic Nerve Diseases most effectively, it is important to detect them as early as possible.

Therefore, Dr.'s Jacob and Fox recommend a yearly screening retinal photo to help them maximize chances of finding Retinal and Optic Nerve Diseases as early as possible.

Canon Retinal Photography

Digital Retinal Photography is quick, comfortable and does not require dilation. The Canon Retinal Camera uses sophisticated software to produce a digital image of the retinal layers and optic nerve. **Please note that *screening* retinal photography is not covered by insurance.**

Please note that if you are currently being treated for a Retinal or Optic Nerve Disease, part of your exam is an in depth photo and evaluation, which will be sent to your medical insurance as per usual.

Please check the appropriate line below and sign at the bottom.

_____ I **DO** want the Canon Digital Retinal Photograph taken, and agree to the additional charge of \$22.

_____ I **DO NOT** want the Canon Digital Retinal Photograph taken.
